# Technical model – Updating or revising

Updating or revising technical models in ProjectWise

A technical model can only be updated or revised when it is at the *'Design'* state.
If it is not at the *'Design'* state, it shall be moved there.

If the technical model is not at the Design state, right-click on the technical model and select '*Change State'*.

Now select '*Send til design?' (Send to design?)*.

The technical model should now be at the design state, ready to be revised or updated with a new file.

If the model is to be updated with a new file which is not in ProjectWise, right-click on the file and select *'Properties'*.

Make sure that you are the *'General'* tab.

Click on the button *'Advanced'* and select *'Import'*.

Now browse to the updated technical model and click *'Åben' (Open)*.

Click on the '*Save'* and then '*Close'*.

Remember to fill in the attributes for the updated technical model and send it to the next state.
