

Links

It is possible to create links to files and folders which is located in ProjectWise. These links can be placed in word processors, emails etc.

You can create links in various ways, but unfortunately not all of those links will work when clicking them. So below it is described how to create two types of links, and they both work.

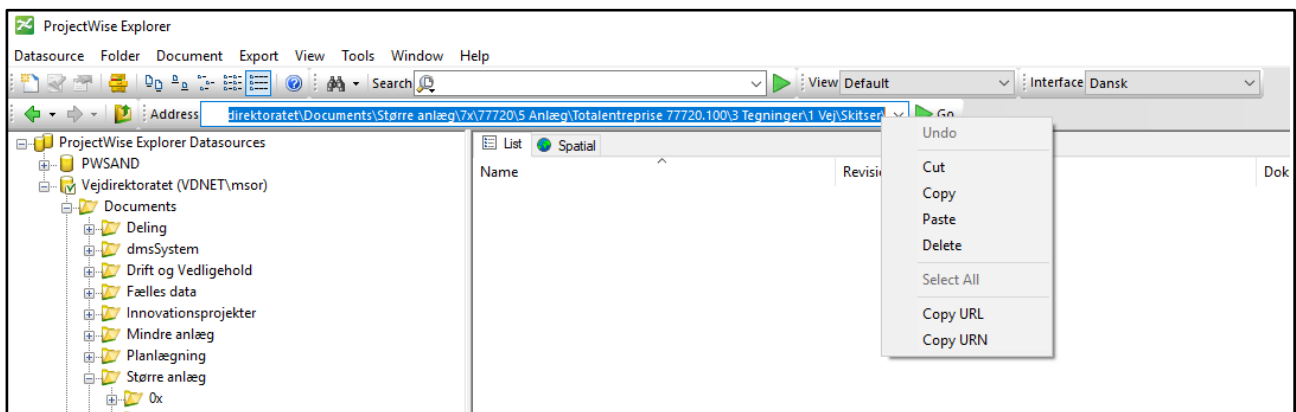

- **URL-links:** In ProjectWise select the address of the file or folder in the address bar, and right click the address. Choose *'Copy URL'*.

A link created with *'Copy URL'* links to a file or folder located at the exact spot where from the link was created, and to the name the file or folder had at the exact time the link was created.

This means that if the file or folder is moved to a different location in ProjectWise or renamed, the link will no longer work.

- **URN-links:** In ProjectWise select the address of the file or folder in the address bar, and right click the address. Choose *'Copy URN'*.

A link created with *'Copy URN'* will always link to the file or folder to which the link was created, no matter if the file or folder is moved or renamed.
